In-transit cargo monitoring solutions

Our solutions offer visibility into in-transit cargo shipments, streamline supply chains, and enhance quality and safety decisions

COPELAND
Engineered for Sustainability

The global perishable supply chain is complex with many handoff points. Our core technologies, coupled with our cold chain expertise, help retailers, restaurants, growers, suppliers, shippers and exporters mitigate food waste while helping ensure only the freshest and safest products reach consumers. Our cold chain solutions provide visibility into in-transit cargo shipments, help enable streamlined supply chains and promote better quality and safety decisions.

Whether you need to monitor and protect the temperature of perishable foods on the road, identify the specific location of a shipment of potentially life-saving medicine, or verify the security of high-value merchandise in transit we have the tracker that fits your business.

Embracing the dynamic landscape of cellular connectivity, Copeland Trackers are designed to offer global connectivity to ensure continuous monitoring of your perishable goods during transit.

With our complete suite of Trackers, we can recommend the correct unit for your geographical region and shipping route.

Next Generation Technology
GO Real-Time 4G/5G Trackers

Tracker Family			
	Standard	LT Series	Global
Positioning	✓	✓	✓
Temperature	✓	✓	✓
Light Detection	✓	✓	✓
Shock	✓	✓	✓
Reusable	✓	✓	✓
Humidity		✓	✓
(-30C capable)[*]		✓	✓
Needle Probes (Pulp)			✓
Dry Ice Probe (-90C)			✓
CO_2			✓
Days in use[*]	20+	60+	90+
Non-Lithium Alternatives[**]	✓	✓	

[*]Factors impacting battery life include; battery type, temperature, cellular availability, upload frequency, and tracker placement

Legacy Technology
GO Real-Time 2G Trackers & Non-Lithium, Battery Trackers

## Oversight software and services

Your Gateway to Advanced Cold Chain Management

Elevate your in-transit shipment tracking with the Oversight Dashboard and Mobile App. Our platform seamlessly integrates data from GO Real-Time Trackers and Loggers, offering secure, cloud-based insights into your perishable supply chain. With the Oversight solution, you gain access to vital shipment information, including temperature, security, and location, all through an intuitive online portal.

Engineered for global use, the Oversight system supports 15 languages. This makes it the perfect tool for a wide range of stakeholders in the cold chain ecosystem, from producers and food retailers to shippers and third-party logistics providers.

Leverage the power of Oversight Cargo Services to preserve the integrity of your shipments. Our modular suite enhances monitoring, analytics, and reporting capabilities, ensuring you stay ahead in managing your cold chain logistics. Supported by Copeland's expertise, we collaborate with your team to optimize shipping operations and fortify your supply chain.

GO loggers – data insight beyond your eyesight

GO NFC Logger

- Monitors time and temperature with data viewed via short-range NFC (Near Field Communications)
- Supports Android and iOS devices with NFC mobile app or NFC Pad Reader
- Data can be stored locally or uploaded and managed via Oversight

GO PDF Logger

- Monitors time and temperature data for perishable and life science products
- Integrated USB connection point for direct computer access
- Automatically generates PDF file, no additional software or readers required
  Available in different models

GO USB Logger

- Reusable, programmable and monitors time, temperature, and humidity levels (probe option available)
- LED screen allows for easy reading of current data and alarm conditions
- Integrated USB connection point for direct computer access that automatically generates a PDF file

GO Contact Logger

- Monitors time and temperature data
- Provides surface read data
- Temperature data accessed via the Contact Reader

GO Systems – flexibility with single solutions

Inbound monitoring

A self-contained, wireless system that provides a streamlined,automatic temperature monitoring experience. AutoSense™ Gateways are installed in facilities. They are pre-configured and automatically connect when turned on, creating their own independent network. When GO Wireless Loggers arrive on containers, data is wirelessly sent to Oversight for ongoing storage and analysis. Text and email alerts are created and delivered to predefined quality assurance personnel.

GO GreenSense™ Program

GO GreenSense is our recycling program designed for the responsible disposal of GO Tracker and Logger products. Copeland is committed to environmental stewardship by facilitating the recycling of batteries and components. We equip you with eco-friendly return boxes and prepaid postage labels, making it easy to send used devices back to us. Join us in our mission to reduce environmental impact and promote sustainability in cargo solutions.
